Backend & Data: MongoDB, Hasura, Directus, Payload.

Testing: Vitest (Unit/Integration), Playwright (E2E).

DevOps & Tooling: Docker, Firebase, Vercel, CI/CD, Shell Scripting, Git, GitHub, GitLab.

Additional: React Native, Electron.js, Clerk, Stripe, MDX, Handlebars, Datagrip, Pipedream, Apify, Figma, Adobe XD.

EXPERIENCE

Testlify

Senior Software Engineer

January 2025 – present

Mumbai, India (Remote)

- Migrating Testlify's 11,000+ page marketing site off WordPress to a modern Jamstack architecture, targeting 60% faster page loads.
- Architected MetaNotes frontend, an AI meeting notetaker with automated recording, transcription, and summaries, saving \$24K annually.
- Deployed a private npm component library adopted across 6+ Testlify repos, eliminating duplicate UI code and speeding feature delivery by 30%.
- Built the frontend for Appforest Timesheets, a Jira plugin for timesheets and cost allocation, replacing a third-party tool, improving cost visibility, and saving \$9K+ annually.
- Engineered a VS Code extension for Appforest Timesheets to auto-track coding time by Git branch and log to Jira, cutting manual tracking by 60–70%.
- Implemented AI-driven interview workflows (Chat, Voice, Video AI), reducing interviewer effort by 40%+ and driving 20–30% revenue growth.
- Architected an LTI-compliant plugin integrating Testlify with major LMS platforms, contributing to 20–30% growth in enterprise adoption.
- Led frontend performance optimisation on the marketing site, lifting Lighthouse scores from 49/53 to 87/91 on mobile/desktop.

FuelBuddy

Software Engineer

September 2023 – December 2024

Gurugram, India

- Built a kiosk application frontend from scratch, reducing fuel dispensing time by 60%.
- Developed and scaled 6 production web applications for customers, admins, franchises, and drivers.
- Designed 8 admin dashboards for data validation and discrepancy resolution, reducing resolution time by 60–70%.
- Mentored a group of 7 developers, establishing code review practices that improved quality and onboarding speed.
- Delivered 100+ features end-to-end across multiple platforms.
- Integrated Sentry and Clarity, reducing issue resolution time by 30% and increasing actionable user insights by 20%.

Modocosm

Software Engineer

July 2021 – October 2023

New York City, US (Remote)

- Designed and maintained 4 CMS-driven responsive websites supporting sustained traffic growth.
- Deconstructed Directus CMS and streamlined schema setup with PostgreSQL queries, reducing bootstrapping time by 70%+.

- Architected an automated betting projection system using Google Sheets and Python scraping, improving accuracy by 15–20%.
- Created 100+ reusable UI components and design systems, accelerating delivery.
- Modernised 7 legacy websites by migrating to Astro.js Jamstack + headless CMS, cutting content launch time by 50%.

PERSONAL PROJECTS

MonoStart | *Chrome Extension*

Live | GitHub

- Built and published a new-tab dashboard extension that replaces Chrome's empty start page with a fully customizable drag-and-drop workspace, cutting daily context-switching across tabs and apps.
- Shipped 7+ productivity widgets — todos, timers, recurring reminders, sticky notes, and embedded live pages — letting users run their entire daily workflow from a single screen.
- Designed it privacy-first with a zero-backend, fully local architecture: no accounts, servers, or tracking, while keeping native Chrome search, history, and autocomplete intact.
